PROFESSIONAL SUMMARY

Frontend engineer who builds web apps in React, Vue and TypeScript. At Tesserac AI, wrote most of the frontend for an accounting compliance app (71 merged PRs), set up end-to-end testing for a legal platform, and built the TypeScript services that connect an AI assistant to Slack and Microsoft Teams. Cares most about maintainable components and accessible UI. Has working experience with Node.js, Go and Python backends, and uses AI coding tools such as Claude Code daily.

WORK EXPERIENCE

Software Engineer – Tesserac AI | Jan - Oct 2026
Tesserac AI builds AI assistants and workflow software for accounting and law firms.

Accounting Compliance Web App (React 19, TypeScript, TanStack Router/Query):
- Lead frontend contributor to a BAS/GST compliance app for accounting firms: authored 314 of 477 commits and 71 merged PRs, about half of the production source code.
- Planned and ran a migration to TanStack Query with 10 shared API hook modules, cutting the 5 largest route and component files by 71–87% (dashboard page from 1,000 to 153 lines).
- Built the end-to-end job workflow: Xero connect wizard, document upload driven by a Chrome extension, transaction review (bank, GST, payroll, invoices, journals), trial balance checks and working papers.
- Shipped passwordless sign-in (magic link, Google OAuth), session management with token revoke, and a password-protected portal for sharing working papers with clients.
- Replaced a fetch-everything query with server-side pagination and bulk actions, merged 12 copy-pasted dialogs into one shared shell, and closed all 30 open Dependabot security advisories.

AI Assistant in Slack & Microsoft Teams (TypeScript, Node.js, CopilotKit):
- Built the TypeScript services that let users chat with an AI assistant in Slack and Teams, from sandbox prototypes to production; wrote about 217 Vitest cases across both.
- Added a live status card and progress indicators to Teams replies, and fixed pasted images (Teams) and pasted tables (Slack) going missing from conversations.
- Found why Slack replies over 12k characters were silently cut off (a bug inside CopilotKit) and shipped a patch.
- Contributed to the Go and Python backends these services call: a streaming chat endpoint, sender authorization checks and Microsoft 365 mail notifications.

AI Agent Tools & Skills (Node.js, Microsoft Graph):
- Rewrote the Microsoft 365 command-line tool the agents use into 16 Node.js modules and added support for shared mailboxes, Teams, meetings, OneNote, SharePoint and OneDrive.
- Fixed the tool after an incident that misfiled 83 client emails (pagination, stable message IDs, undo logs for batch moves) and covered it with a mocked test harness.
- Wrote and maintained agent skill instructions for Google Workspace, LexisNexis legal research and legal intake, used by law-firm clients.

Legal Practice Platform & Microsoft Word Add-in (React, Office.js, Playwright):
- Set up the first end-to-end test suite: 66 Playwright tests with page objects and API mocks, running in GitHub Actions on Chromium, Firefox and WebKit.
- Built AI checklist generation from document templates, with live job status over WebSocket (backoff reconnect, state kept across page refresh).
- Replaced base64 form uploads with pre-signed storage uploads and per-file progress bars, cutting the submit timeout from 5 min to 1 min.
- Fixed placeholder editing in the Word add-in under Track Changes, which had left orphaned content controls and broken occurrence counts.

Project & Work-Item Tracker (React, TypeScript):
- Built the "My work" page and home summary so users see work assigned to them across all projects, plus the Go endpoint behind it.
- Added bulk selection, inline status changes and quick comments to the cross-project list, matching the project-scoped views.
- Fixed layout bugs where pages failed to scroll and long pasted text pushed dialog buttons off-screen.

Email Template Builder (React, Zustand, dnd-kit, Vitest):
- Bootstrapped a drag-and-drop email builder: document store with undo/redo (Zustand, Immer, Zundo), resizable columns and 5 block types.
- Made exports render correctly in Outlook and Apple Mail (600px tables, table-based dividers, UTF-8 EML) and locked canvas-to-export parity with 41 Vitest cases.
- Fixed an AI editing agent (Mastra) that dropped content from long briefs by tightening its prompt with a section checklist and raising its step limit.

Front End Engineer – NexLaw Inc, San Francisco, USA (Remote) | May - Oct 2025

NexLaw Legal Platform (Vue 2, Vuex, Astro):
- Split the subscription feature into modular Vue 2 components and Vuex modules.
- Added polling and optimistic updates to the legal chat, so messages show up without waiting on the server.
- Restructured the Trial Prep module around structured Vuex stores to keep automation data consistent.
- Designed and built the UI states missing from the design specs.
- Built feature pages in Astro with Vue and React components.

Nex360 Platform Revamp: Authentication & Audience Intelligence (Nuxt 3, TypeScript):
- Built the modules in Nuxt 3 (Vue 3 Composition API) and TypeScript with hybrid SSR/CSR rendering.
- Set up a feature-based architecture with typed, SSR-hydrated Pinia stores.

- Built accessible UI with Tailwind CSS 4 and shadcn-nuxt to WCAG 2.1 AA.
- Routed all REST calls through one HTTP client with JWT auth and Zod-validated API contracts.
- Built interactive analytics dashboards with D3 and Unovis.

Front End Engineer Intern – AyoPajak, PT Garda Bina Utama, Jakarta | Sept - Nov 2024
Online tax filing platform for individuals and businesses in Indonesia, recognized by the tax authority.
- Turned UI/UX mockups into reusable React components for the individual tax return (e-SPT OP) module.
- Worked with the backend team to debug and speed up existing features.

EDUCATION

Purwadhika Digital Technology School, Jakarta – Full-stack Web Development (Score: 88.32 / 100)
Diponegoro University, Semarang – B.Eng. in Mechanical Engineering (GPA: 3.26 / 4.00)

TECHNICAL SKILLS

Languages: TypeScript, JavaScript (ES6+); working knowledge of Go and Python
Frontend: React, Next.js, Vue 2/3, Nuxt 3, Astro, TanStack Router/Query/Table, Zustand, Pinia, Vuex, Redux, React Hook Form, Zod
Styling & UI: Tailwind CSS, shadcn/ui, Radix UI, D3, WCAG 2.1 AA accessibility
Testing: Playwright (E2E, page objects, API mocking), Vitest
APIs & Integrations: REST, WebSockets, SSE, Node.js, Supabase, Microsoft Graph, Slack API, Office.js, CopilotKit, Mastra
Tools: Git, GitHub Actions, Vite, Docker (basic), Claude Code

ADDITIONAL INFORMATION

Languages: Fluent in Bahasa Indonesia and English; conversational German
Availability: Open to remote or hybrid roles
